Unit-1- Answer Bank

	Questions	**Answers**	Difficulty Level	Marks	Time(In Minutes)
1	Amplify upon the barriers that arise at the level of message formation & delivery (any two).	**The barriers that arise at the level of message formation & delivery (any two).:** **Intrapersonal Barriers:**Individuals are unique because of their idiosyncracies . This is because of differences in experience, education, value, and personality. Each of us interpret the same information in different ways as our thinking varies. Following are the common causes responsible for an individual's inbuilt barrier: **i)Wrong Assumption:** These are made because the senderor the receiver does not have adequate knowledge about each other's background or entertains certain false notion, which are fixed in their mind. Sometimes the speaker does not realize the backgrounds, education , and experience of different people can be different. **ii) Differing Backgrounds:** No two persons have similar background. People vary in terms of their education, culture, language, environment, age, sex, financial status, etc. Our background plays a significant role in how we interpret the message. At times , something not experienced by you earlier will be difficult to interpret or appreciate. To enhance your communication skills , it is necessary to know the background of your audience . You can accordingly use that information to construct your message. Empathy or identification with another person is the solution to this barrier. One must make an effort to understand where the listener can find it difficult to comprehend the message because of the difference between your background and that of the listener.Use language understood by the receiver to avoid ambiguity and reduce multiple meanings in your communication. When writing or speaking:	Very Difficult	05	15

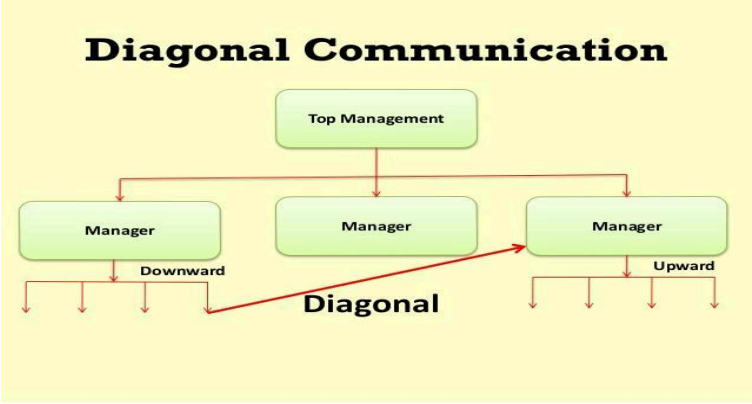

Unit-1- Answer Bank

		1)Think of your audience . How well do they understand the language ? How much do they know about your logic? 2) Select your words with care, especially technical terms. Words must be suited to your audience's language skills. 3)If you have to use slightly difficult or unfamiliar words , try to explain these as a part of your communication. 4)Don't fall into the trap , however , of oversimplifying your language.			
2	How is feedback important in communication? Give two examples of delayed feedback.	If the message received is the same as the message sent , there will be a response. The transmission of receiver's response to sender is called Feedback. Feedback is essential as it is the barometer of effective communication. Communication cycle is complete only when you get a response from the receiver of the message . Otherwise you need to resend the message. Delayed feedback:-i) A job applicant's application reaches after the scheduled deadline because of	Very Difficult	5	15
3	What is encoding and decoding? Give two examples each for inappropriate encoding and decoding.	Encoding : It is the sender who encodes the message. Encoding means giving certain shape or form to the thoughts or ideas in the sender's mind. Word , oral or written , colours , pictures , graphs are some examples Decoding : Understanding and interpreting the message or information sent by the sender to the receiver.	Very Difficult	5	15
4	What is a common core? Give any three examples of barriers caused due to negligence in common core.		Very Difficult	5	15
5	What is a semantic Barrier? Give any three examples of semantic barriers.	**Noise** is any interference in the message received leads to the production of 'noise' .The term communication barrier, or that which inhibits or distorts the message , is an expansion of the concept noise. Noise here does not mean any harsh sound, but a break in the communication process. Noise is defined as any unplanned interference in the communication environment ,	Very Difficult	5	15

		which causes hindrance in the transmission of the message. A communication environment. **Semantic Noise** is generated internally resulting from errors in the message itself. It may be because of the connotative meaning to be interpreted differently by the sender or receiver. Egs: - ambiguous sentence structure, faulty grammar or misspellings, incorrect punctuation.			
6	Explain the flow of communication. Illustrate it with examples from the existing communication patterns in your college/institution.	**Flow of Communication**: Information flows in an organization both formally and informally. The term formal communication refers to communication that follows the official hierarchy and is required to one's job. Internal operational and external operational communication can be described as formal. In fact , it is the bulk of communication that a business needs in order to operate flows through these channels. For example when a manager instructs a subordinate on some matter or when an employee brings a problem to a supervisor's attention , the act of communication is formal. Information of various kinds flowing through formal channels , such as policy or procedural changes, orders, instructions, confidential reports etc. is classified as formal communication. This type of communication can flow in various directions- downward, upward, lateral, or diagonal. **Downward Communication**: Downward communication flows from a manager , down to the chain of command. When managers inform, instruct, advice, or request their subordinates, the communication flows in a downward pattern. This is generally used to convey routine information , new policies or procedures, to seek clarification, to ask for an analysis, etc.Also, superiors send feedback about their subordinates action through this channel.Such communication increases awareness about the organization among subordinates and employees and enables managers to evaluate the performance of their subordinates.Downward communication can take any forms-memos, notices , face to face interactions, or telephone conversations. However, this should be adequately balanced. **Upward Communication**:	Very Difficult	5	20

		When subordinates send reports to inform their superiors or to present their findings and recommendations , the communication flows upward. This type of communication keeps managers aware of how employees feel about their jobs, colleagues and the organization in general. Managers also rely on upward communication for making certain decisions or solving some problems which concern the organization. The extent of upward communication , especially that which is initiated from at the lowest level depends on the organizational culture. In an open culture without too many hierarchical levels , managers are able to create a climate of trust and respect. And implement participative decision making or empowerment.. Here there is considerable upward communication. This is because employees provide the input for managerial decisions. In a highly authoritative environment, where downward flow dominates , upward communication still takes at managerial ranks.. Suggestion boxes, employee attitude surveys, grievance procedures , superior subordinate decisions, review reports, statistical analyses, etc. provide restricted information to top management. **Lateral or Horizontal Communication:** This form of communication takes place among peer groups or hierarchically equivalent employees. Such communication is often necessary to facilitate coordination , save time, and bridge communication gap among various departments. Occasionally , these lateral relationships are formally sanctioned . But generally, they are informally created to bypass the formal hierarchical channels and expedite action. Lateral communication enables the sharing of information with a view to apprise the peer group of activities of a department . For example-The Vice- President ((Marketing) sending some survey results in the form of a memo to the Vice- President (Production) for further action .This type of communication is vital for the growth of an organization as it builds cooperation among the various branches. **Diagonal or Crosswise Communication**: Diagonal or crosswise communication flows in all directions and cuts across functions and levels in an organization. For example, when a sales manager communicates directly with the Vice			

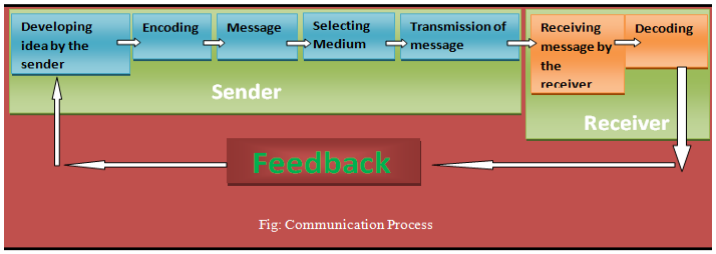

Unit-1- Answer Bank

		President (production), who is not only in a different division , but also at a higher level in the organization , they are engaged in diagonal communication . Though this form of communication deviates from the normal chain of command , there is no doubt that it is quick and efficient. In some situations ignoring vertical and horizontal channels expedites action and prevents other employees from being used as merely as conduits between senders and receivers. The increased use of email also encourages cross wise communication via- e- mail with another employee, regardless of the receiver's function or status. Since there is no specific line of command , diagonal communication is also referred to as cross wise , radial, or circular communication , depending upon the structure of the organization. For instance , a Managing Director could directly call a supervisor and give instructions.  			
7	What is a grapevine? Is it always harmful? If not, Why? (Give examples)	Grapevine : Informal communication that takes place in the organization is termed as informal or grapevine communication. It is not always harmful as it is used for developing the human resource of an organization. It is multi -directional . It helps to promote unity and solidarity ,it gives a vent to public opinion. It is capable in resolving conflicts.	Very Difficult	5	20
8	Explain the following terms with reference to communication barriers and give two examples for each term.	a) **Semantic Gap**- it is gap or error in the message itself	Very Difficult	5	20

Unit-1- Answer Bank

	a) Semantic Gap b) Negative attitude	Egs:-misspellings, improper punctuation marks, faculty grammar, incorrect sentence construction. **b)Negative attitude**: a person with negative attitude does not positively accept the changes occurring in the ways of working or technology which creates barrier n understanding and working			
9	Explain the following terms with reference to communication barriers and give two examples for each term. a) Absence of common frame of reference b) Know it All	a) **Absence of frame of reference-intrapersonal Barrier**. if the sender does not know the background of receiver , the receiver may not be able to understand the information correctly. Egs- A teacher talking about the mountain climbing expedition in a class. b) **Know it all-** Intrapersonal barrier , a person is under the impression the he is aware of every thing but then when he gets an important information he is put in an embarrassing situation Egs; Manager not paying attention during the general meeting is put in an embarrassing situation. A student over confident that he knows every thing may score less in the test.	Very Difficult	5	15
10	Identify the barriers that lead to miscommunication in the scene described below. How can the manager overcome this barrier? "I Called for a meeting with the supervisors. But none turned up….nobody pays attention to me in this place…… it'd be better to quit…."		Very Difficult	5	10
	Difficult	**ANSWERS**			
1	Explain Channel noise with any two apt examples.	Channel Noise: Any interference in the mechanics of the medium used to send the message. Egs: noise in telephone lines, illegible handwriting	Difficult	5	20

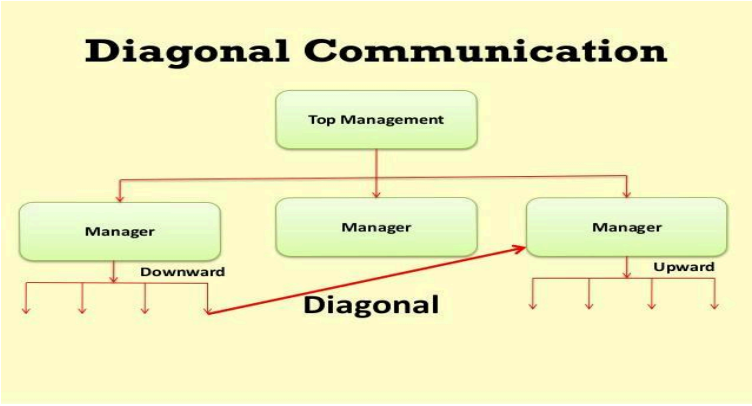

Unit-1- Answer Bank

2	Explain the essentials of effective communication with relevant diagram.	Essentials of Effective communication: ● A common communication environment ● Cooperation between sender and receiver ● Selection of an appropriate channel ● Correct encoding and decoding of the message ● Receipt of desired response and feedback Diagram of Communication Process  Fig: Communication Process	Difficult	5	15
3	Explain semantic noise with any two apt examples.	Semantic Noise: It is generate internally resulting from errors in the message itself Egs: ambiguous sentence structure, faulty grammar	Difficult	5	20
4	What is Communication? Explain the different human's level of Communication.	Communication: It is the exchange of information ideas , knowledge between sender and receiver through an accepted code of symbols. Human's Level of Communication: i) Extra personal Communication: -communication between human and non-human entities .- A parrot responding to your greeting. Requires perfect coordination and understanding between the sender and the receiver.- at least one of them transmits information or respond s in a sign language only. ii) Interpersonal Communication:	Difficult	5	15

Unit-1- Answer Bank

		-Sharing of information among people. -there are few participants involved - the interact ants are in close physical proximity to each other - many sensory channels are put to use -roles of sender and receiver keep on alternating -immediate feedback is possible -non- verbal communication plays a major role in interpretation of the message - it can be formal or informal			
5	Explain in detail with schematic representation, how information flows formally in all the directions of organization.	**Flow of Communication**: Information flows in an organization both formally and informally. The term formal communication refers to communication that follows the official hierarchy and is required to one's job. Internal operational and external operational communication can be described as formal. In fact , it is the bulk of communication that a business needs in order to operate flows through these channels. For example when a manager instructs a subordinate on some matter or when an employee brings a problem to a supervisor's attention , the act of communication is formal. Information of various kinds flowing through formal channels , such as policy or procedural changes, orders, instructions, confidential reports etc. is classified as formal communication. This type of communication can flow in various directions- downward, upward, lateral, or diagonal. **Downward Communication**: Downward communication flows from a manager , down to the chain of command. When managers inform, instruct, advice, or request their subordinates, the communication flows in a downward pattern. This is generally used to convey routine information , new policies or procedures, to seek clarification, to ask for an analysis, etc. Also, superiors send feedback about their subordinates action through this channel. Such communication	Difficult	5	15

		increases awareness about the organization among subordinates and employees and enables managers to evaluate the performance of their subordinates. Downward communication can take any forms-memos, notices , face to face interactions, or telephone conversations. However, this should be adequately balanced. **Upward Communication**: When subordinates send reports to inform their superiors or to present their findings and recommendations , the communication flows upward. This type of communication keeps managers aware of how employees feel about their jobs, colleagues and the organization in general. Managers also rely on upward communication for making certain decisions or solving some problems which concern the organization. The extent of upward communication , especially that which is initiated from at the lowest level depends on the organizational culture. In an open culture without too many hierarchical levels , managers are able to create a climate of trust and respect. And implement participative decision making or empowerment.. Here there is considerable upward communication. This is because employees provide the input for managerial decisions. In a highly authoritative environment, where downward flow dominates , upward communication still takes at managerial ranks.. Suggestion boxes, employee attitude surveys, grievance procedures , superior subordinate decisions, review reports, statistical analyses, etc. provide restricted information to top management. **Lateral or Horizontal Communication:** This form of communication takes place among peer groups or hierarchically equivalent employees. Such communication is often necessary to facilitate coordination , save time, and bridge communication gap among various departments. Occasionally , these lateral relationships are formally sanctioned . But generally, they are informally created to bypass the formal hierarchical channels and expedite action. Lateral communication enables the sharing of information with a view to apprise the peer group of activities of a department . For example-The Vice- President ((Marketing) sending some survey results in the form of a memo to the Vice- President (Production) for further action .This type of			

		communication is vital for the growth of an organization as it builds cooperation among the various branches. **Diagonal or Crosswise Communication**: Diagonal or crosswise communication flows in all directions and cuts across functions and levels in an organization. For example, when a sales manager communicates directly with the Vice President (production), who is not only in a different division , but also at a higher level in the organization , they are engaged in diagonal communication . Though this form of communication deviates from the normal chain of command , there is no doubt that it is quick and efficient. In some situations ignoring vertical and horizontal channels expedites action and prevents other employees from being used as merely as conduits between senders and receivers . The increased use of email also encourages cross wise communication via- e- mail with another employee, regardless of the receiver's function or status. Since there is no specific line of command , diagonal communication is also referred to as cross wise , radial, or circular communication , depending upon the structure of the organization. For instance , a Managing Director could directly call a supervisor and give instructions.  			
6	Elaborate the variety of patterns that emerges when communication combines through vertical and horizontal channels . (netw)	Formal Communication Networks:	Difficult	5	20

Unit-1- Answer Bank

		i) Chain Network:-represents a vertical hierarchy in which communication can flow upward and down ward -it is in direct line of authority with no deviation ii) Y Network- it is effect a multi level hierarchy - combination of vertical and horizontal flow of communication - two subordinates report a superior with two levels of authority above the later. iii) Wheel Network:- several subordinates report to one superior. ● Combination of horizontal and diagonal flow of communication ● - subordinates are of equal rank and all of them report to one superior iii) Circle Network:-employees interact with the adjacent members. V) **All channel Network**: - enables employees to communicate freely with others - No restriction on who can communicate on whom -all are equal as no one employee formally or informally assumes the leading role. - every body's views are equally and openly shared.			
7	What is communication? Explain the process with the help of schematic representation.	**Communication** can be defined as the exchange of information , ideas , and knowledge between sender and receiver through an accepted code of symbols. **Communication process with the help of schematic representation.**	Difficult	5	15

Unit-1- Answer Bank

		 Fig: Communication Process			
8	Which networks are used consciously by the organization to develop their human resources and their productivity?	**Networks are used consciously by the organization to develop their human resources and their productivity:** Informal network is very active in almost every organization. communication in an organization travels along an informal network- the grapevine. There appear certain patterns for this informal communication ● Single Strand: the message is passed from one person to another along a single strand. ● Gossip: one person passes information to all the others . ● Probability: each person tells others at random ● Cluster: It is that flow of information in which some people tell a selected few of the others.	Difficult	5	15
9	Enhance the common causes responsible for an individual's inbuilt barriers.	**Common causes responsible for an individual's inbuilt barriers:** **Wrong Assumption:** These are made because the senderor the receiver does not have adequate knowledge about each other's background or entertains certain false notion, which are fixed in their mind. Sometimes the speaker does not realize the backgrounds, education , and experience of different people can be different. **Varied Perception**:	Difficult	5	20
10	Elaborate the barriers that stem from inappropriate transaction of words between two or more person.	**Barriers that stem from inappropriate transaction of words between two or more person:** **Interpersonal Barriers:** ● **Limited Vocabulary:** An inadequate vocabularycan be a major hindrance in communication. In your communication the connotative and denotative	Difficult	5	20

		meanings of words should be clear to the receiver. .During your speech , if you are at a loss for words , your communication will be very ineffective, and you will leave a poor impression on the audience. On the other hand if you have a varied and substantial vocabulary , you can create an everlasting impression. One must know how to use the vocabulary. One should make constant efforts to increase vocabulary by regularly reading a variety of books and listening to native speakers of the language. ● **Incongruity of Verbal and Non- Verbal Messages**: A communicator should acclimatize himself to communication environment, think from the angle of the listener , and then communicate. Non- verbal communication usually enhances and enlivens verbal communication. Generalizations , based on assumptions about physical appearance or dress, can also lead to sever communication barrier. Guidelines to improve your appearance: -Dress according to the occasion -Wear neat and clean clothes -Choose an appropriate hairstyle -Wear clean and polished shoes Non- verbal cues should match your verbal messages , adding to their effectiveness and enhancing your image as a competent and interesting communicator. ● **Emotional Outburst:**A moderate level ofemotional involvement intensifies communication making it more personal. Excessive emotional involvement Can be obstacle to communication .For example, extreme anger can create an emotionally charged			

		environment and therefore rational discussion is not possible. likewise prejudice, stereotype , and boredom all hinder effective communication. By sharpening self-awareness, intuition, and empathy , emotions can help in developing an environment conducive to good communication. ● **Communication Selectivity:** If you are the receiver in a communication process , and you pay attention only to a part of the message, you are imposing a barrier known as communication selectivity. You do this because you are interested only in that part of the message which may be of use to you. ● **Cultural Variation:** To compete successfully in today'sglobalized business environment , we must overcome the communication inadequacy arising from different languages and cultures.This holds good in the area of education also.One make efforts to understand the culture of the educational campus in which you would be studying.Your success , as a student and as a professional , lies in knowing the business practices, social customs , and etiquette of a particular country. ● **Poor Listening Skills:** Hearing is a passive exercise while listening requires careful attention and accurate decoding of the signals received from the speaker. Misunderstanding and conflicts can be mitigated if people listen to the message with attention. Various distractions that hinder listening can be emotional disturbances , indifference, aggressiveness, and wandering attention. Sometimes individual is so engrossed in his own			

Unit-1- Answer Bank

		thoughts and worries that he is unable to concentrate on listening.			
11	Explain the barriers that arise due to the structure and complexity of the protocol followed by the organization.	**Barriers that arise due to the structure and complexity of the protocol followed by the organization:** Following are the organizational Barriers : ● **Too many Transfer Stations**: The more links in a communication chain ,the greater are the chances of communication that will occur. The message gets distorted in huge organization , with several layers of communication channel. The message gets distorted at each level not only because of poor listening or lack of concentration , but also because of several other reasons. Some employees may filter out a part of the message which they consider unimportant. Having too many transfer stations is always a deterrent to effective communication and should be avoided. ● **Fear of Superiors**: in rigidly structured organizations , fear or awe of the superiors prevents subordinates from speaking frankly. An employee may not be pleased with the way his boss works but is unable to put his points across because of losing his boss's goodwill.An open environment is conducive to increasing the confidence and goodwill of a communicator. To avoid speaking directly to their boss , some employees may either avoid all communication with their superior. At the other extreme , they may present all the information they have. In written communication , this results in bulky reports where essential information is clubbed with unimportant details. This unfocused message results in	Difficult	5	20

Unit-1- Answer Bank

		waste of time. By encouraging active participation from their subordinated , senior officers pave the way for more ideas , resources or solutions that come up from subordinates. ● **Negative Tendencies**: Many organizations create work groups . Some groups are formed according to the demands of the task, such as- accomplishing a particular project, recreational groups, social, or community purposes. These groups may be formal or informal. and consists of people with similar values, attitudes, opinions, beliefs, and behaviours.It is possible to have a communication barrier due to confliction of ideas between member and non- members of a group. However, good managers can take advantage of these situations by considering these groups, not as trouble shooters , but regarding them as rein forcers of the organization's objectives and values. ● **Use of Inappropriate Media**: Some of the common media used in organizations are graphs and charts, telephones, facsimiles machines , boards,, e-mails, , films and slides, computer presentations, teleconferencing, and video conferencing. While choosing the medium you should keep in mind the advantages, disadvantages and potential barriers to communication. Before sending a message , you should consider the following factors while choosing the medium: ● Time ● cost ● type of message ● Intended audience			

		• Telephone for instance would not be an ideal medium for conveying confidential information. Such messages are best conveyed in person or if receiver is located at in another office, by speed post. Types letters provide permanence , are preferable for information which requires to be stored for future reference. Usually mix media is best for effective communication. For example m, a telephone call to book an order, followed by a confirmatory letter ensures that there is no possible misunderstanding of the message. • **Information Overload:** One of the major problems faced by organizations today is the availability of huge amount of data which the receiver is unable to handle effectively..This is known as information overload.. The results of information overload are fatigue, disinterest, and boredom. Under these circumstances , further communication is not possible. Very often , vital relevant information gets mixed up with too many irrelevant details, and therefore goes ignored by the receiver. Thus the quality of information is much more important than quantity. To reduce information overload in an organization , screening of information is mandatory. Messages should be directed only to those people who are likely to benefit from the information. Major points should be highlighted, leaving out all irrelevant details. It will reduce the problem of information overload to a great extent.			
	Moderate				

Unit-1- Answer Bank

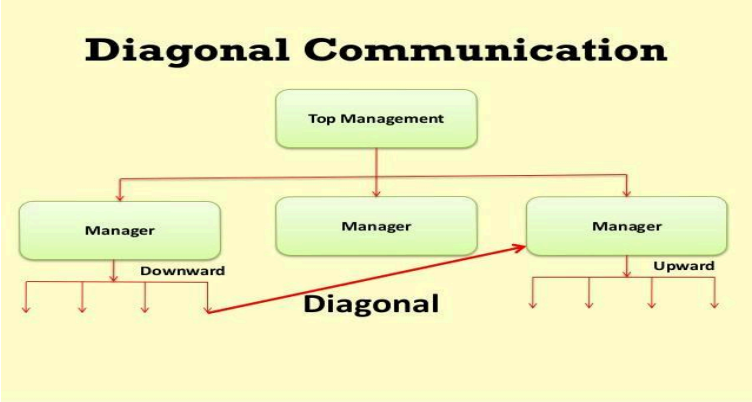

1	What is Intrapersonal and interpersonal barriers? Explain the barriers at these levels of communication.	**Intrapersonal and interpersonal barriers:** **Intrapersonal Barriers:** Intrapersonal barriers stem from an individual's attitudes or habits. Individuals differ in experience, education, value, and personality. Each of us interpret the same information in different ways as our thinking varies. Following are Common causes responsible for an individual's inbuilt barriers.: ● **Wrong Assumption:** Wrong assumptions are generally made because the sender or the receiver does not have adequate knowledge about each other's background or entertains certain false notions, which are fixed in their mind. Sometime s speaker does not realize that backgrounds, education, and experience of different people can be different. **Way to overcome or minimize**: To strengthen your skills as a communicator try to put yourself in the shoes of the listener. ● **Varied Perception:** The story of six blind men compared the body of an elephant with various objects. This is how an individual perceives reality. Individuals in an organization perceive situations in different ways. Perception at times can be biased **Ways to overcome or minimize**: The best way is to step back and take a wider perspective of the issue. ● **Differing Backgrounds:** No two persons have similar background. People vary in terms of their education, culture, language, environment, age, sex, financial status, etc.Our background plays a significant role in how we interpret the message. At times , something not experienced by you earlier will be difficult to interpret or appreciate. To enhance your communication skills , it is necessary to know the background of your audience . You	Moderate	5	20

		can accordingly use that information to construct your message. Empathy or identification with another person is the solution to this barrier. One must make an effort to understand where the listener can find it difficult to comprehend the message because of the difference between your background and that of the listener.Uselanguage understood by the receiver to avoid ambiguity and reduce multiple meanings in your communication. When writing or speaking: 1)Think of your audience . How well do they understand the language ? How much do they know about your logic? 2) Select your words with care, especially technical terms. Words must be suited to your audience's language skills. 3)If you have to use slightly difficult or unfamiliar words , try to explain these as a part of your communication. 4)Don't fall into the trap , however , of oversimplifying your language. ● **Wrong Inferences:**At times it happens when you fail to distinguish what actually exists and what you had assumed to exist. Inferences are more dramatic than facts, and for this reason they give more scope for gossip and rumors to crop up **.**Inferences supported by factsare essential for professionals when they analyzematerial , solve problems and plan procedures . System analysts , marketing specialists , advertisers, architects, engineers,, designers, and others must work on various premises and draw inferences after collecting factual data.When presenting any inference in the course of your work, you could use qualifiers such as ' evidence suggest', or 'in my opinion ' to remind yourself and the receiver that this is not yet establish as fact.			

		• **Impervious Categories:** In general, we react positively to information only if it is in consonance with our own views and attitudes. Conversely when we receive information that does not confirm to our personal views , habitsand attitudes, or appears unfavorable to us, we tend to react negatively or even disbelieve . Rejection, distortion, and avoidance are three common, undesirable, and negative reactions to unfavorable information. Advances in communication and technologies are so rapid today that many people have difficulty in quickly adapting themselves to these to these developments.Instead if taking advantage of these developments that expedite the communication process , they tend to resist and criticize them. This is a result of having a closed mind. Such people are called misoneists.In some people, certain prejudices are so deeply embedded in their psyche that these cannot be challenged. • **Categorical Thinking:** People who feel that they ' know it all' are called'pansophists'. This type of thinking exists in people who feel that they know everything about a particular subject, and therefore refuse to accept any further information on that topic. For example in in a general Body meeting of your organization,you are to be briefed about the annual budget. However, you do not pay attention because you feel you have already been briefed about it by your secretary the previous day.T his type of thinking can pose a major barrier , leading to a failure in communication . In such instances, the receivers refuse information because of their 'know-it –all' attitude. The clue to detecting this barrier in others and ourselves is the use of words like all, always, everybody, everything, every time and their opposites			

		like none, never, nobody, and nothing. If a message contains too many of these words, then there is a fair chance of the communication getting distorted. To avoid this barrier, substitute these words with phrases like' in most situations' or 'likely'.			
2	Describe in brief the flow of communication with appropriate diagram.	**Flow of Communication**: Information flows in an organization both formally and informally. The term formal communication refers to communication that follows the official hierarchy and is required to one's job. Internal operational and external operational communication can be described as formal. In fact , it is the bulk of communication that a business needs in order to operate flows through these channels. For example when a manager instructs a subordinate on some matter or when an employee brings a problem to a supervisor's attention , the act of communication is formal. Information of various kinds flowing through formal channels , such as policy or procedural changes, orders, instructions, confidential reports etc. is classified as formal communication. This type of communication can flow in various directions- downward, upward, lateral, or diagonal. **Downward Communication**: Downward communication flows from a manager , down to the chain of command. When managers inform, instruct, advice, or request their subordinates, the communication flows in a downward pattern. This is generally used to convey routine information , new policies or procedures, to seek clarification, to ask for an analysis, etc. Also, superiors send feedback about their subordinates action through this channel. Such communication increases awareness about the organization among subordinates and employees and enables managers to evaluate the performance of their subordinates. Downward communication can take any forms-memos, notices , face to face interactions, or telephone conversations. However, this should be adequately balanced. **Upward Communication**: When subordinates send reports to inform their superiors or to present their findings and recommendations , the communication	Moderate	5	15

		flows upward. This type of communication keeps managers aware of how employees feel about their jobs, colleagues and the organization in general. Managers also rely on upward communication for making certain decisions or solving some problems which concern the organization. The extent of upward communication , especially that which is initiated from at the lowest level depends on the organizational culture. In an open culture without too many hierarchical levels , managers are able to create a climate of trust and respect. And implement participative decision making or empowerment.. Here there is considerable upward communication. This is because employees provide the input for managerial decisions. In a highly authoritative environment, where downward flow dominates , upward communication still takes at managerial ranks.. Suggestion boxes, employee attitude surveys, grievance procedures , superior subordinate decisions, review reports, statistical analyses, etc. provide restricted information to top management. **Lateral or Horizontal Communication:** This form of communication takes place among peer groups or hierarchically equivalent employees. Such communication is often necessary to facilitate coordination , save time, and bridge communication gap among various departments. Occasionally , these lateral relationships are formally sanctioned . But generally, they are informally created to bypass the formal hierarchical channels and expedite action. Lateral communication enables the sharing of information with a view to apprise the peer group of activities of a department . For example-The Vice- President ((Marketing) sending some survey results in the form of a memo to the Vice- President (Production) for further action .This type of communication is vital for the growth of an organization as it builds cooperation among the various branches. **Diagonal or Crosswise Communication**: Diagonal or crosswise communication flows in all directions and cuts across functions and levels in an organization. For example, when a sales manager communicates directly with the Vice President (production), who is not only in a different division , but also at a higher level in the organization , they are engaged in			

		diagonal communication . Though this form of communication deviates from the normal chain of command , there is no doubt that it is quick and efficient. In some situations ignoring vertical and horizontal channels expedites action and prevents other employees from being used as merely as conduits between senders and receivers . The increased use of email also encourages cross wise communication via- e- mail with another employee, regardless of the receiver's function or status. Since there is no specific line of command , diagonal communication is also referred to as cross wise , radial, or circular communication , depending upon the structure of the organization. For instance , a Managing Director could directly call a supervisor and give instructions.  			
3	What is communication process? Explain the different levels of communication .	**communication process:**Communication can be defined as the exchange of information, ideas, and knowledge between sender and receiver through an accepted code of symbols.It is termed effective only when the receiver receives the message intended by the sender in the same perspective. The sender encodes the message and sends it through a channel. This channel is nothing but the language used—words, actions, signs, objects , or a combination of these. The receiver receives the message , decodes it , and acts on it. If the message received is the same as the message sent , there will be a response; if not there has been a break -down of communication. This may be because of ' noise'	Moderate	5	15

Unit-1- Answer Bank

		The transmission of receiver's response to the sender is called feedback. If you are sending the a message to some body , your communication cycle is complete only when you get a response from the recipient of your message. Your communication is effective when you get a desired response **Levels of communication:** i) **Extra personal Communication**: -communication between human and non-human entities .- A parrot responding to your greeting. Requires perfect coordination and understanding between the sender and the receiver.- at least one of them transmits information or respond s in a sign language only. ii) **Intra Personal**: This takes place within the individual. This kind of communication pertains to thinking which is the basis of information processing. Internal dialogue with oneself takes place- planning , weighing, considering, and processing information.Self determination and self motivation takes place at this level. iii) **Interpersonal Communication**: -Sharing of information among people. -there are few participants involved - the interact ants are in close physical proximity to each other - many sensory channels are put to use -roles of sender and receiver keep on alternating -immediate feedback is possible -non- verbal communication plays a major role in interpretation of the message			

		- it can be formal or informal iv)**Organizational Communication**: Communication that takes place at different hierarchical level.This type of communication can be divided into: ● Internal Operational: All communication that occurs in conducting work within an organization . ● External Operational:Work related communication with the people outside the organization ● Personal: Communication without purpose v)**Mass Communication**: This kind of communication we require a mediator. There are several mass media such as journals , books, television, and newspaper. Characteristics of mass communication: ● **Large Reach**: Mass media communications reach audience scattered over a wide geographical area. ● **Impersonality:**This kind of communication is largely as the participants are unknown to each other. ● **Presence of a gatekeeper:** Mass communication needs additional persons, institutions or organizations to convey the message from sender to receiver. This ‘‘gatekeeper ‘ or mediator could be a person or an organized group of persons active in transferring or sending information from the source to the target audience through a mass medium. For example , in a newspaper the editor makes choices and decides which news makes it to the hands of the reader. The editor therefore the gatekeeper in the mass communication process.

4	What is an internal operational communication? Elaborate the different barriers at organizational level of communication	internal operational communication: **Internal Operational**: The communication that occurs in the process of operations within an organization. **Barriers at Organizational Level:** i)**Too many transfer stations:** - The message gets distorted at each level of organizational hierarchy - some employees may filter out a part of message which they may consider unimportant . **ii)Negative Tendencies:** - Many organizations create work groups. - Some groups are formed as the demand of the task to achieve a task like project group, recreational , social or for community purpose. - These groups consist people who share same values, , attitudes, opinions, beliefs, and behaviours. - - barriers arise because of conflict between members and non- members. - -good managers can take advantage of the situations and can use these groups to reinforce the organization's objectives and values. - They can be asked to organize orientation sessions for new recruits to project the corporate image. **iii)Use of Inappropriate Media:** - Some of the common media used in organizations are graphs, and charts , telephone, fax machines, e- mails etc. - while choosing the medium you should be aware of advantages , disadvantages and potential barriers to communication - you should consider the following factors : • Time Type of message • Cost Intended audience	Moderate	5	15

Unit-1- Answer Bank

5	What is an interpersonal level of communication? Explain the barriers at this level of communication.	**Interpersonal Barriers** stem from inappropriate transaction of words between two or more persons. They are as a result of limitations in the communication skills of sender and receiver. i**)Limited vocabulary**: -Inadequate vocabulary can be a major hindrance in communication – - at certain times we search for exact words or phrase -meaning of the word should be clear to the receiver -loss of words during a speech creates a poor impression -a substantial vocabulary can create an everlasting impression -one can increase vocabulary by reading variety books and listening to native speakers of language **ii)Incongruity of verbal and non- verbal Messages**: -communicator should adjust himself to the communication environment. -non- verbal cues provide a deeper insight into the sender's message. -non- verbal communication should be used to enhance your image as a competent and interesting communicator. iii**)Emotional Outburst:** -Moderate level of emotional involvement intensifies communication making it personal -extreme anger, prejudice, stereotype, boredom all hinder effective communication. -emotions like happiness and excitement also interfere in communication. -sharpening self- awareness , intuition, and empathy , emotions can help in developing an environment highly conducive to good communication. **iv) Communication selectivity**: -if you are a receiver in communication process and you pay attention only to a part of the message, you are imposing a barrier. -you are interested only in that part of the message which may be of use to us.	Moderate	5	15

Unit-1- Answer Bank

		- Receiver breaks the flow of communication. **v) Cultural Variations:** -take efforts to understand the culture of educational campus you would be studying. -your success as a student or a professional lies in knowing the business practices, social customs, and etiquette of a particular company. **vi) Poor Listening**: - various distractions that hinder listening are- emotional disturbances, indifference, aggressiveness, and wandering attention. -Sometimes an individual is so engrossed in his own thoughts and worries that he is unable to concentrate on listening. **vii)Noise in the Channel**: -noise interferes in the transmission of signals. -it can also occur in visual, audio – visual, , written, physical or psychological forms. -technical or physical noise refers ti sound of machines , blare of music from a stereo system. - Human noise can be experienced when employees gather for a meeting or a member arrives late distracting ever body's attention.			
6	What is an intrapersonal level of communication? Explain the barriers at this level of communication	**Intrapersonal level of communication:** Intrapersonal barriers stem from an individual's attitudes or habits. Individuals differ in experience, education, value, and personality. Each of us interpret the same information in different ways as our thinking varies. Following are Common causes responsible for an individual's inbuilt barriers **Barriers at Intrapersonal Level of Communication** **a)Wrong Assumption:** Wrong assumptions are generally made because the sender or the receiver does not have adequate knowledge about each other's background or entertains certain false notions, which are fixed in their mind. Sometime s speaker does not realize that	Moderate	5	15

		backgrounds, education, and experience of different people can be different. **Ways to overcome or minimize**: To strengthen your skills as a communicator try to put yourself in the shoes of the listener. **b)Varied Perception:** The story of six blind men compared the body of an elephant with various objects. This is how an individual perceives reality. Individuals in an organization perceive situations in different ways. Perception at times can be biased **Ways to overcome or minimize**: The best way is to step back and take a wider perspective of the issue. **c)Differing Backgrounds:** No two persons have similar background. People vary in terms of their education, culture, language, environment, age, sex, financial status, etc. Our background plays a significant role in how we interpret the message. At times , something not experienced by you earlier will be difficult to interpret or appreciate. To enhance your communication skills , it is necessary to know the background of your audience . You can accordingly use that information to construct your message. Empathy or identification with another person is the solution to this barrier. One must make an effort to understand where the listener can find it difficult to comprehend the message because of the difference between your background and that of the listener.Use language understood by the receiver to avoid ambiguity and reduce multiple meanings in your communication. When writing or speaking: 1)Think of your audience . How well do they understand the language ? How much do they know about your logic?			

		2) Select your words with care, especially technical terms. Words must be suited to your audience's language skills. 3)If you have to use slightly difficult or unfamiliar words , try to explain these as a part of your communication. 4)Don't fall into the trap , however , of oversimplifying your language. ● **d)Wrong inference:** At times it happens when you fail to distinguish what actually exists and what you had assumed to exist. Inferences are more dramatic than facts, and for this reason they give more scope for gossip and rumour to crop up **.**Inferences supported by factsare essential for professionals when they analysematerial , solve problems and plan procedures . System analysts , marketing specialists , advertisers, architects, engineers,, designers, and others must work on various premises and draw inferences after collecting factual data. When presenting any inference in the course of your work, you could use qualifiers such as ' evidence suggest', or 'in my opinion ' to remind yourself and the receiver that this is not yet establish as fact. **e)Impervious Categories:** In general, we react positively to information only if it is in consonance with our own views and attitudes. Conversely when we receive information that does not confirm to our personal views , habitsand attitudes, or appears unfavorable to us, we tend to react negatively or even disbelieve . Rejection, distortion, and avoidance are three common, undesirable, and negative reactions to unfavorable information. Advances in communication and technologies are so rapid today that many people have difficulty in quickly			

Unit-1- Answer Bank

		adapting themselves to these to these developments.Instead if taking advantage of these developments that expedite the communication process , they tend to resist and criticize them. This is a result of having a closed mind. Such people are called misoneists. In some people, certain prejudices are so deeply embedded in their psyche that these cannot be challenged. **f)Categorical Thinking:** People who feel that they ‘ know it all’ are called‘pansophists’. This type of thinking exists in people who feel that they know everything about a particular subject, and therefore refuse to accept any further information on that topic. For example in in a general Body meeting of your organization,you are to be briefed about the annual budget. However, you do not pay attention because you feel you have already been briefed about it by your secretary the previous day.Thhis type of thinking can pose a major barrier , leading to a failure in communication . In such instances, the receivers refuse information because of their ‘know-it –all’ attitude. The clue to detecting this barrier in others and ourselves is the use of words like all, always, everybody, everything, every time and their opposites like none, never, nobody, and nothing. If a message contains too many of these words, then there is a fair chance of the communication getting distorted. To avoid this barrier, substitute these words with phrases like’in most situations’ or’likely’.			
7	Elaborate the different formal and informal networks of communication with apt diagram.	**Formal and informal networks of communication with apt diagram.** **Formal and informal networks of communication:** **Formal Networks:There are five common communication networks that are important in an organization:**	Moderate	5	15

Unit-1- Answer Bank

		i) **Chain Network:** It represents a vertical hierarchy in which communication can flow only upward or downward **.**We can find this type of network in direct line of authority communication with no deviations. ii) **Y network :** It is in effect a multi- level hierarchy and a combination of horizontal and vertical flow of communication. If we turn the Y upside down , two subordinates reporting to one senior, with two levels of authority above the latter. iii) **The wheel network:** it refers to several subordinates reporting to a superior. This is a combination of horizontal and diagonal communication . Though the subordinates are of equal rank , all of them report to one superior, and without any interaction between themselves. iv) **Circle network:** It allows employees to interact with adjacent members but no further. It is at three level hierarchy . There is vertical communication between superiors and subordinates , and horizontal communication only at the lowest level. v) **All -channel Network:** It is least structured , enables each employee to communicate freely with the others . There are no restrictions on who can communicate with whom . All are equal as no one employee formally or informally assumes a leading role. Hence, every body's views are equally and openly shared **Informal Network** is very active in almost every organization. Some organizations use it consciously to develop their human			

Unit-1- Answer Bank

		resources and in turn , their productivity. Patterns emerge for informal communication are: i) Single strand: message is passed from one person to another. ii) Gossip: one person passes the information to all the others iii) Probability: each person tells others at random. **iv)** Cluster: popular pattern of grapevine. Some people tell a selected few of others.			
8	What is an interpersonal level of communication? Explain the barriers at this level of communication.	**Interpersonal Level of communication :** **Interpersonal Barriers** stem from inappropriate transaction of words between two or more persons. They are as a result of limitations in the communication skills of sender and receiver. i**)Limited vocabulary**: -Inadequate vocabulary can be a major hindrance in communication – - at certain times we search for exact words or phrase -meaning of the word should be clear to the receiver -loss of words during a speech creates a poor impression -a substantial vocabulary can create an everlasting impression -one can increase vocabulary by reading variety books and listening to native speakers of language **ii)Incongruity of verbal and non- verbal Messages**: -communicator should adjust himself to the communication environment. -non- verbal cues provide a deeper insight into the sender's message. -non- verbal communication should be used to enhance your image as a competent and interesting communicator. iii**)Emotional Outburst:** -Moderate level of emotional involvement intensifies communication making it personal	Moderate	5	15

Unit-1- Answer Bank

		-extreme anger, prejudice, stereotype, boredom all hinder effective communication. -emotions like happiness and excitement also interfere in communication. -sharpening self- awareness , intuition, and empathy , emotions can help in developing an environment highly conducive to good communication. **iv)Communication selectivity**: -if you are a receiver in communication process and you pay attention only to a part of the message, you are imposing a barrier. -you are interested only in that part of the message which may be of use to us. - Receiver breaks the flow of communication. **v) Cultural Variations:** -take efforts to understand the culture of educational campus you would be studying. -your success as a student or a professional lies in knowing the business practices, social customs, and etiquette of a particular company. **vi) Poor Listening**: - various distractions that hinder listening are- emotional disturbances, indifference, aggressiveness, and wandering attention. -Sometimes an individual is so engrossed in his own thoughts and worries that he is unable to concentrate on listening. **vii)Noise in the Channel**: -noise interferes in the transmission of signals. -it can also occur in visual, audio – visual, , written, physical or psychological forms. -technical or physical noise refers ti sound of machines , blare of music from a stereo system.			

Unit-1- Answer Bank

		- Human noise can be experienced when employees gather for a meeting or a member arrives late distracting ever body's attention			
9	What is a noise? Explain its types and the barriers at organizational level of communication.	**Noise:**Any interference in the message sent and message received leads to the production of noise. Communication barriers or that which distorts the message , is noise**.** It is not any harsh sound but abreak in the communication process.A barrier is like a sieve , allowing only a part of the message to filter through , as a result the desired response is not achieved. **<u>Barriers at Organizational Level</u>**: i)**Too many transfer stations**: - The message gets distorted at each level of organizational hierarchy - some employees may filter out a part of message which they may consider unimportant . **ii) Fear of Superiors**: In rigidly structured organizations, fear or awe of the superiors prevents subordinate from speaking frankly. An employee may not be pleased with the way his boss works but is unable to put his point across because of losing his boss's goodwill. As supervisor, it is essential to create an environment which enables people to speak freely. An open environment is conducive to increasing the confidence and goodwill of a communicator. To avoid speaking directly to their boss, some employees may either shun all communication with their superiors. At the other extreme, they may present all the information that they have. This is because they feel that they shall be viewed in an unfavourable way by leaving out some important information. In written communication, this results in bulky reports , where essential information is clubbed with unimportant details.This finally results in waste of time. iii) **<u>Negative Tendencies:</u>** ● Many organizations create work groups. ● Some groups are formed as the demand of the task to achieve a task like project group, recreational , social or for community purpose.	Moderate	5	15

		● These groups consist people who share same values, , attitudes, opinions, beliefs, and behaviours. ● - barriers arise because of conflict between members and non- members. ● -good managers can take advantage of the situations and can use these groups to reinforce the organization's objectives and values. ● They can be asked to organize orientation sessions for new recruits to project the corporate image. **iv)<u>Use of Inappropriate Media</u>:** - Some of the common media used in organizations are graphs, and charts , telephone, fax machines, e- mails etc. - while choosing the medium you should be aware of advantages , disadvantages and potential barriers to communication - you should consider the following factors : ● Time Type of message ● Cost Intended audience **v)Information Overload:**One of the major problems faced by organizations today is the availability of huge amount of data which the receiver is unable to handle effectively. This is known as information overload. The ususal results of information overload are fatigue , disinterest, and boredom. Under these circumstance further communication is not possible. Very often , vital , relevant information gets mixed up with too many irrelevant details and therefore goes ignored by the receiver. Thus, the quality of the information is much more important than the quantity. To reduce information overload in an organization screening of information is mandatory. Messages should directed only to those people who are likely to benefit from the information. Major points should be highlighted , leaving out all irrelevant details. This kind of screening will be			

Unit-1- Answer Bank

		appreciated by all and can reduce the problem of information overload to a great extent			
10	What is an organizational level of communication? Write short note with cognate examples on the following:- A} Too many transfer stations. B} Negative tendencies. C} Inappropriate use of medium.	**Organizational level of communication:** Communication in a organization takes place at different hierarchical levels. It is extremely necessary for the sustenance of any organization. Since a large number of employees are involved in several different activities, the need to communicate becomes greater in an organization. With proper networking system, communication in an organization is possible even without direct contact between employees. This kind of communication can be further divided into : ● **Internal – operational:** All communication that occurs in conducting work within an organization is classified as internal – operational. ● **External operational:** The work related communication that an organization does with people outside the organization is called external –operational. ● **Personal:** All communication in an organization that occurs without purpose as far as business is concerned ia called personal communication. **short note** with cognate examples on the following:- **Write short note with cognate examples on the following:-** **a)Too many transfer stations: Too many Transfer Stations**: The more links in a communication chain ,the greater are the chances of communication that will occur. The message gets distorted in huge organization , with several layers of communication channel. The message gets distorted at each level not only because of poor listening or lack of concentration , but also because of several other reasons. Some employees may filter out a part of the message which they consider unimportant.	Moderate	5	15

Unit-1- Answer Bank

		Having too many transfer stations is always a deterrent to effective communication and should be avoided. **B} Negative tendencies:** Many organizations create work groups. While some groups are formed according to the demands of the tasks, such as accomplishing a particular project, many other small groups are also formed for recreational , social, or community purposes. These groups may be formal or informal, and generally consisit of people who share similar values , attitudes, opinions, beliefs,, and behaviours. It is possible to have a communication barrier due to confliction of ideas between members and non- members of a group. **C} Inappropriate use of medium :**Some common media used in organizations are graphs and charts, telephones, boards, e-mails, films and slides, computer presentations , teleconferencing, and video conferencing.. While choosing the medium you should keep in mind the advantages and disadvantages and potential barriers to communication. Before sending a message , you should consider the following factors while choosing the medium: time, cost type of message intended audience.. The telephone for instance , would not be an ideal mediumfor conveying confidential information. Such messages are best conveyed in person or, if the receiver is located in another , office, by speedpost.Typed letters , which provide permanence , are preferable for information which requires to be stored for future reference. Mix media is best for effective communication .for example , a telephone call to book an order, followed by a confirmatory letter esures that there is no possible misunderstanding of the message.			
11	What is Intrapersonal level barrier? Write short note with cognate examples on the following:- a) Wrong assumptions. b) Impervious categories.	**Intrapersonal level barrier: Intrapersonal Barriers:** Intrapersonal barriers stem from an individual's attitudes or habits. 		details, and therefore goes ignored by the receiver. Thus the quality of information is much more important than quantity. **Ways to overcome:** To reduce information overload in an organization , screening of information is mandatory. Messages should be directed only to those people who are likely to benefit from the information. Major points should be highlighted, leaving out all irrelevant details. It will reduce the problem of information overload to a great extent. b) **Incongruity of verbal and non-verbal messages:** A communicator should acclimatize himself to communication environment , think from the angle of listener and then communicate. Misinterpreted non-verbal communication acts as another barrier to effective information gathering. Non- verbal communication usually enhances and enlivens verbal communication .Action speak louder than words, and thus, non-verbal cues provide a deeper insight into the sender's message. Generalizations based on assumption about physical appearance or dress, can also lead to severe communication barrier. Physical appearance often serves as one of the most important non- verbal cues. There is great disparity in the use and interpretation of non-verbal messages across countries and cultures .For example in Kenya, a mother in-law and a son- in-law avoid eye contact. In fact they turn their backs to each other. In America, this would be a sign of disrespect. **Ways to overcome:** Your non-verbal cues should consistently match your verbal messages, adding to their			

		effectiveness and enhancing your image as competent and interesting communicator. **c)Communication selectivity:** If you are the receiver in a communication process , and you pay attention only to a part of the message, you are imposing a barrier known as communication selectivity.You do this because you are interestedonly in that part of the message which may be of use to you. **d)Emotional outburst: Emotional Outburst:**A moderate level ofemotional involvement intensifies communication making it more personal. Excessive emotional involvement Can be obstacle to communication .For example, extreme anger can create an emotionally charged environment and therefore rational discussion is not possible. likewise prejudice, stereotype , and boredom all hinder effective communication. **Ways to overcome**: By sharpening self- awareness, intuition, and empathy , emotions can help in developing an environment conducive to good communication. **e)Noise in the channel:** Noise interferes greatly in the transmission of signals. Noise is any unwanted signal which acts as a hindrance in the flow of communication. It is not limited to harsh sounds , but can also occur in visual , audio- visual , written, physical or psychological forms.Technical or physical noise refers to the din of machines, the blare of music from a stereo system, or other such sounds which make the task of the listener difficult. Human noise can be experienced when, for			

Unit-1- Answer Bank

		example , employees gather for a meeting and a member arrives late distracting everybody's attention .Disturbance in telephone lines, poorly designed acoustics of a room, dim typescripts, and illegible writing are some more examples of technical noise.			
14	write short note on the following:- a) Language as a tool of communication. b) General and technical Communication(support with examples) c) Noise	Short Notes: a) **Language as a tool of communication**: Effective communication is made possible with the help of language. Language employs a combination of words to communicate ideas in aa meaningful way. By changing The word order in a sentence , you can change its meaning , and even make it meaningless. There is no obvious co-relation between the symbol and its meaning., as language is arbitrary. When language came into being, a community of people agreed to represent a certain object or idea by a specific sound or symbols.. In the very first words, there may have been some correlation between the symbol and the sense-they may have been onomatopoeic. A few such words that stll persist in the English language are buzz, drizzle, and murmur. Language is directly dependent on people and cannot exist in isolation. It arose out of human need to communicate. Primitive man communicated only with sign language and cries. Late as human beings became more interdependent and complex, language came into being. Language is universal and specific to the individual. b) **General and technical Communication**(support with examples): Communication is not only important in an organization but also in daily life . In everyday life , you will find that communication occurs everywhere. When	Moderate	5	20

		your alarm clock goes off, it is communication through sound and urges you to get out of bed. You use a particular brand of toothpaste , as there is an impact of the company's persuasive advertising or its salesman's spiel. Watching morning news is communication. You say goodbye to your family as you leave home- this is communication. You call for a cab to drive to your office – this is communication. At the workplace all activities revolve around communication, be it oral or written. Your boss calls to tell you about your increment –this is communication.. At the end of the day , you return home and read the news paper that is communication. Messages that are non- technical or informal in nature are categorized as general purpose communication, whereas messages pertaining to technical , industrial, or business matters belong to the category of technical or business communication. **c)Noise:Noise** is any interference in the message sent and message received leads to production of noise. Noise here does not mean cacophony , but a break in the communication process. If noise occurs because of technological factors , it is a smaller problem as it can be removed by correcting the technological faults.It is unplanned interference in the communication environment, which causes hindrance in the transmission of the message. Noise distorts interpretation or the decoding part of the communication process. **ii) Channel Noise**: Any interference in the mechanics of the medium used to send the

<tr><td>1</td><td>What is an organization level of communication? Explain its different types?</td><td>organization level of communication:
Communication in an organization takes place at different levels.It is necessary for the sustenance of any organization. With proper networking system , communication in an organization is possible even without direct contact between the employees. Organizational communication can be divided into the following:
i) Internal Operational: The communication that occurs in the process of operations within an organization.

ii)External Operational :The work related communication that an organization has with people outside the organization is called external operational.
iii) Personal: All communication in an

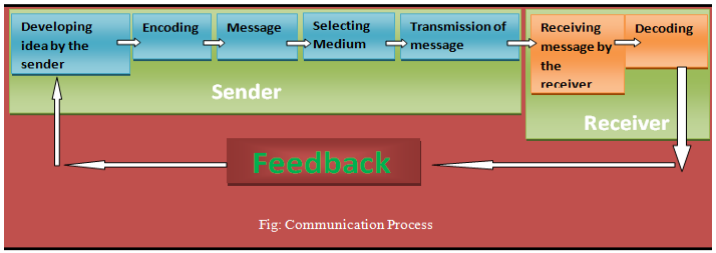

organization other than that for business or official purposes is called personal.</td><td>Easy</td><td>3</td><td>5</td></tr>
<tr><td>2</td><td>What is Grapevine? State its advantages and disadvantages.</td><td>Grapevine:Communication in an organization also travels along an informal network- - the grapevine. This informal network is very active in almost every organization.<table><tr><td>Advantages</td><td>Disadvantages</td></tr><tr><td>Not expensive</td><td>Reveals some degree of error</td></tr><tr><td>rapid</td><td>Harmful if baseless or imaginary</td></tr></table></td><td>Easy</td><td>3</td><td>5</td></tr>

<tr><td>5</td><td>Why mass communication is called as heterogeneous and anonymous? Explain the its characteristics</td><td>Mass communication: For this kind of communication we require a mediator to transmit information. There are several mass media such as journals, books, television, and newspapers. Since the messages are for a large audience that is heterogeneous and anonymous, the approach is impersonal.
Characteristics of mass communication:
i)Large Reach: Mass media reach audience scattered over a wide geographical area.
ii) Impersonality: Largely impersonal as the participants are unknown to each other.
iii)Presence of a gatekeeper: Mass communication needs additional persons, institutions or organization to convey the</td><td>Easy</td><td>3</td><td>5</td></tr>

		message from sender to receiver.The ‘ gatekeeper’ or mediator could be a person or an organized group persons active in transferring or sending the information from the source to the target audience through a mass medium. For example, in a newspaper the editor makes choices and decides which news makes it to the hands of the reader .The editor therefore is the gatekeeper.			
6	How is interpersonal communication is different from other levels of communication?	**Interpersonal communication is different from other levels of communication:** This takes place within the individual. This kind of communication pertains to thinking , which is the basis of information processing. Without such internal dialogue , one cannot proceed to the further levels of communication- interpersonal and organizational While we are communicating with other part , internal dialogue with oneself continues concurrently- planning, weighing, considering , and processing information.	Easy	2	5
7	Define the following terms:- a) Formal communication b) Gatekeeper c) Difference between encoding and decoding	**a)Formal communication**: **b)Gatekeeper**: Mass communication needs additional persons, institutions or organization to convey the message from sender to receiver.The ‘ gatekeeper’ or mediator could be a person or an organized group persons active in transferring or sending the information from the source to the target audience through a mass medium. For example, in a newspaper the editor makes choices and decides which news makes it to the hands of the reader .The editor therefore is the gatekeeper. c)Difference between encoding and decoding **iii) Difference between encoding and decoding**	Easy		5
8	Draw a neat diagram of formal communication network.		Easy	2	5
9	Draw a neat diagram of informal communication network.		Easy	2	5
10	Define communication process and draw a neat diagram of communication process.	Communication can be defined as the exchange of information, ideas, and knowledge between sender and receiver through an accepted code of symbols.It is termed effective only when the receiver receives the message intended by the sender in the same	Easy	2	5

		perspective. The sender encodes the message and sends it through a channel. This channel is nothing but the language used—words, actions, signs, objects , or a combination of these. The receiver receives the message , decodes it , and acts on it. If the message received is the same as the message sent , there will be a response; if not there has been a break -down of communication. This may be because of ' noise' The transmission of receiver's response to the sender is called feedback. If you are sending the a message to some body , your communication cycle is complete only when you get a response from the recipient of your message. Your communication is effective when you get a desired response. Diagram of Communication Process  Fig: Communication Process			
11	Define communication process and draw a neat diagram of flow of communication.	Communication can be defined as the exchange of information, ideas, and knowledge between sender and receiver through an accepted code of symbols.It is termed effective only when the receiver receives the message intended by the sender in the same perspective. The sender encodes the message and sends it through a channel. This channel is nothing but the language used—words, actions, signs, objects , or a combination of these. The receiver receives the message , decodes it , and acts on it. If the message received is the same as the message sent , there will be a response; if not there has been a break -down of communication. This may be because of ' noise' The transmission of receiver's response to the sender is called feedback. If you are sending the a message to some body , your communication cycle is complete only when you get a response from the recipient of your message. Your communication is effective when you get a desired response.	Easy	2	5

Unit-1- Answer Bank

		Diagram of Flow of Communication 			
12	Why feedback is called as an essential barometer of communication process.	**Feedback is called as an essential barometer of communication process**. If you are sending the a message to somebody , your communication cycle is complete only when you get a response from the recipient of your message. Once you receive a response , you know that you have communicated your message to the other party successfully. Your communication is effective when you get a desired response from the receiver.	Easy	2	5
13	What is a common core and communication environment?	**common core:** For sharing information you may require two parties and there also should be cooperation and understanding between them. They should have a mutually accepted code of signals making up a common language .so, communication can be defined as the exchange of information , ideas, and knowledge between sender and receiver through an accepted code of symbols. **Communication Environment :**Communication takes place in a well -definedset-up. This is called the communication environment. A classroom is the communication environmentwhen a teacher delivers lectures to students. A teacher's cubicle becomes the communication environmentwhen a student personally approaches the teacher.	Easy	2	5

Unit-1- Answer Bank

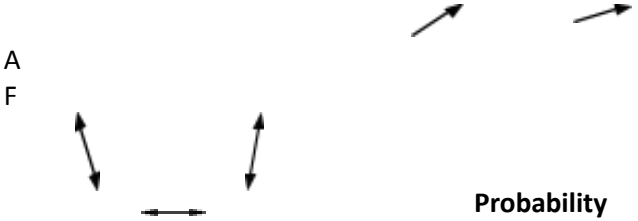

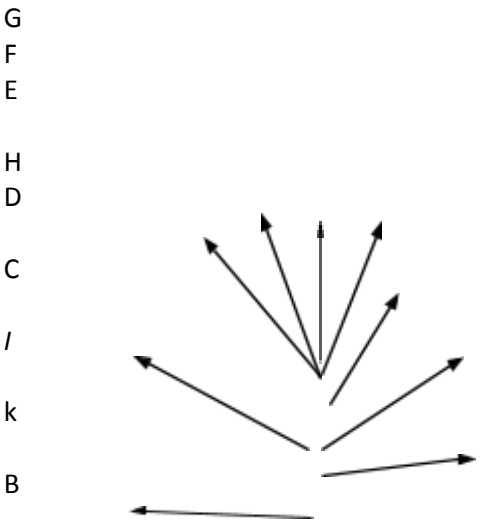

14	Explain how barriers arise through because of inappropriate use of medium. Support your answer with examples from your own environment.	**Barriers that arise through because of inappropriate use of medium:** some of the common mediaused in organization are graphs and charts, telephones. Facsimile machines, boards, e-mail, telephones, films and slides, computer presentations, teleconferencing, and video conferencing. While choosing the medium you should therefore keep in mind the advantages, disadvantagesand potential barrier to communication. Before sending a message, you should consider the following factors while choosing a medium: ● Time ● Cost ● Type of message ● Intended audience For instance the telephone for would not be an ideal medium for conveying confidential information. Such messages are best conveyed in person or, if the receiver is located in another office , by speed post. Typed letters , provide permanence, are preferable for information which can be stored for future reference. Usually a mix media is best for effective communication. For example: a telephone call to book an order, followed by a confirmatory letter ensures that there is no possible misunderstanding of the message	Easy	2	5
15	Explain how barriers arise through because of wrong inferences. Support your answer with examples from your own environment and provide solution to avoid it.	**Barriers that arise through because of wrong inferences.** Inferences are more dramatic than facts , and for this reason they give morescope for gossip and rum ours to crop up.Inferences supported by facts are essential for professionals when they analyze material , solve problems and plan procedures. When presenting any inference in the course of your work, you could use qualifiers such as 'evidence suggest' or'in my opinion' to remind yourself and the receiver that this is not yet established as fact.	Easy	2	5

Unit-1- Answer Bank

		Eg: You have returned from business trip and you find that two of your colleagues are absent. They don't turn up for several days . Since there is a recession on , you draw an inference that they have been laid off. The fact is that they have been promoted and sent to another department. This is fact-inference confusion.			
16	Explain the lateral and cross-wise flow of communication with appropriate examples and diagram.	**Lateral and cross-wise flow of communication with appropriate examples and diagram:** **Lateral and cross-wise flow of communication**: **Lateral Communication or Horizontal communication:**This form of communication takes place among peer groups or hierarchically equivalentemployees**.** Such communication is often necessary to facilitatecoordination, save time , and bridge the communication gap among various departments. These lateral relationships areformally sanctioned. But generally they are informally created to bypass the formal hierarchical channels and expedite action. From the organization point of view lateral communication can be advantageous or disadvantageous. Lateral communication can be beneficial. They can also create conflicts when formal vertical channels are bypassed by employees in order to accomplish their goals, or when superiors find out that they had not been consulted before certain decisions were taken. Lateral communication enables the sharing of information with a view to apprise the peer group of activities of a department . Vice President(marketing) sending some survey results in the form of a memo to the Vice President (Production) for further action is an example of Lateral communication. This type of communication is very vital for the growth of an organization as it builds cooperation among the various branches. **Diagonal or Cross-wise communication:** Diagonal or cross- wise communication flows in all directions and cuts across functions and levels in an organization . For example, when a sales manager communicated directly with the Vice-President (Production), who is not only in a different division , but also at a higher level in the organization, they are engaged in	Easy	3	5

		diagonal communication. Though this form of communication deviates from the normal chain of command, there os no doubt that it is quick and efficient.In some situations, ignoring vertical and horizontal channels expedites action and prevents other employees from being used merely as conduits between senders and receivers. The increased use of e- mail also encourages cross- wise communication. Any employee can communicate via e- mail with another employee , regardless of the receiver's function or status. Since there is no specific line of command , diagonal communication is also referred to as cross-wise, radial, or circular communication , depending upon the structure of the organization. For instance , a Managing Director could directly call a supervisor and give instructions.  			
17	Explain following network of communication with diagram:- a) Circle b) Probability c) Gossip	**Circle Network**: It allows employees to interact with adjacent members but no further .It is at three level hierarchy. There is vertical communication between superiors and subordinates, and horizontal communication only at the lowest level B K D G 	Easy	3	5

Unit-1- Answer Bank

		 **Probability** **Circle Network** **Probability:**Each person tells others at random**.**  **Gossip** **Gossip: One person passes information to all the others**			
18	Explain the difference between categorical thinking and communication selectivity with apt example.	**Difference between categorical thinking and communication selectivity:** People who feel that they 'know it all ' are called pan sophists.This type of thinking exists in people who feel that they know everything about a particular subject and therefore refuse to accept any further information on that topic.	Easy	3	5

Unit-1- Answer Bank

		Communication selectivity: If you are the receiver in a communication process , and you pay attention only to a part of the message you are imposing a barrier known as communication selectivity. You do this because you are interested only in that part of the message which may be of use to you.
